

Teflon Ring Sizer & Installer Kit

This tool is made from high quality Stainless Steel and assists with the installation of the sealing rings for the Stator Shaft.

Simply place the rings on the resizing tool to expand them. This then allows you to slide the rings onto the proper grooves on the Stator Shaft. The tool can then be used to compress the rings back to their correct working diameter.

Without this tool installation is extremely difficult as these rings can be tricky to install.

The Pin included is used for the 6T70E Applications only, and is removed for all other applications.

Our Part No. 6T30.TOOL02
